Natural Stone Carpets Coatings

Coatings

Natural Stone Carpet's coating systems are used for floors and walls and are applied in several layers, depending on the substrate, from aesthetically pleasing to extremely chemical-resistant applications.

The use of a coating system will make your walls easy to clean, resistant to chemicals or fluid-tight. Aesthetic properties of the product obviously play an important role as well.

The various ways of processing the product make it possible to fully adapt the character of the floor to your personal requirements and preferences. For example, floors can be given a terrazzo finish by scattering deco chips. Matt, satin and various degrees of non-skid finishes are available as well.

Applications

A 0.2 to 0.6 mm coating system is recommended for floors intended for light mechanical loads. Depending on the actual application, a range of choices is available, from chemical-resistant to aesthetic coatings.

Coating systems are an easy way of giving your floor a dust-free, easy-to-clean and – if required – non-skid finish.

Properties

Solvent free
High non slip properties
Fluid Tight
Resistant to chemicals
Seamless and aesthetic

Colours

Any colour can be produced using the RAL system

Thickness

2mm – 3mm

Applications

- Warehouses
- Workshops
- Garages
- DIY Stores
- Pharmaceutical
- Retail
