Marble Stone Carpet

Marble Stone Carpet is an addition to the Natural Stone Carpet range. At first glance you would think it is a modern version of Terrazzo. The natural properties of this floor are particularly beautiful, it is a very exclusive floor covering. This floor has warmth to it and it also adapts to the surrounding pleasant temperature. It is also ideal for use with under floor heating due to its structured nature.

The marble we use is sourced from the Northern Region of Italy in close proximity to the Alps. Marble Stone Carpets are created by grinding marble slabs down to the required size. The stone is then polished to remove any rough edges. The particles of Marble are then mixed with a resin to form the basis for your floor. You can choose from several standard colours which have been composed from the Natural Marble colours. With the purchase of a Marble Stone Carpet you will insure yourself with virtually a maintenance free floor.

Properties

- Solvent free
- High non slip properties
- Colourfast
